

Technology That Stands Apart

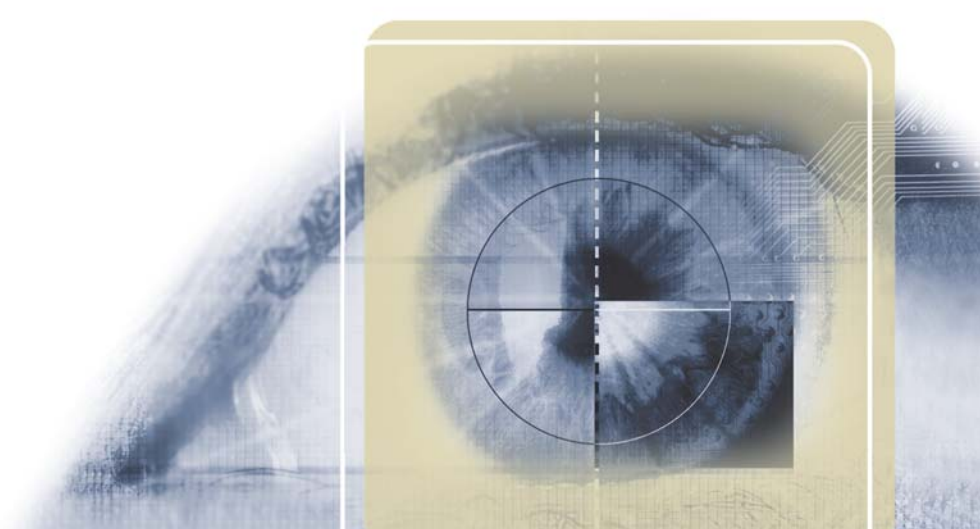

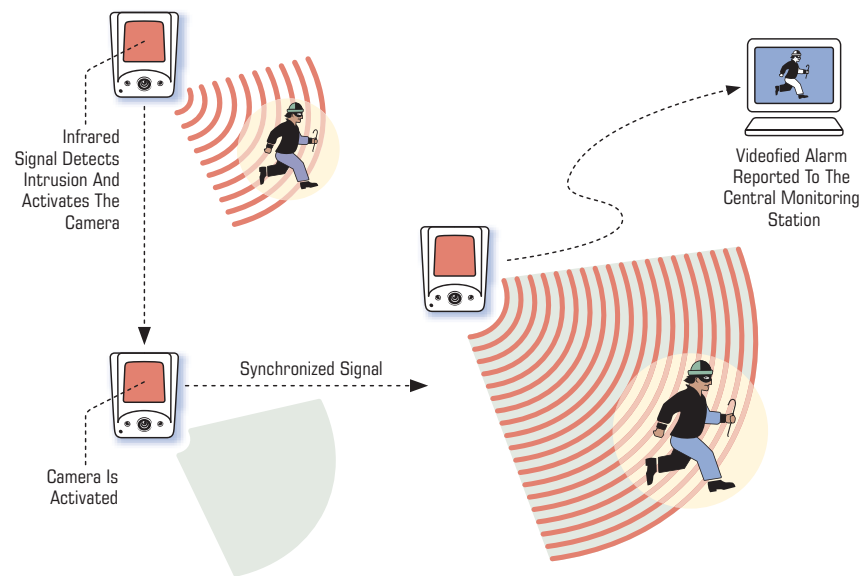

The VIA-Pro system was developed using a variety of technological innovations, including advanced wireless, bi-directional RF communications technology. The motion sensor features advanced digital PIR (Passive InfraRed) technology integrated with a .2 lux camera and night vision illuminators for superior performance. When triggered, the camera captures video and compresses it as an MPEG file that is sent to the panel. The encrypted Videofied alarm is then sent to the central station.

Proven Performance

The VIA-Pro system was developed in Europe in response to strict laws that require visual verification of alarms – either by video or a security guard. Police response time for the Videofied alarms was significantly faster than those alarms verified by security guards. * 50,000 systems have been installed in Europe, and not a single false police dispatch or false alarm fine has been reported.

*Average response times for alarms verified by security guards were 80 minutes. Videofied alarms response times were 7 minutes. RSIalarm makes no claims as to the actual police response times in your jurisdiction.

Do you have the vision
 to get **videofied?**

Videofied (vid-e-o-fied) v.,v. tr. To make secure, as:
a. To enable expedited police response to verified crime.
b. To safeguard homeowner privacy with video alarm verification. **c.** To strengthen and secure a dwelling with S²VIEW technology. **d.** To monitor with a camera activated only during an alarm.

Your Emergency Treated Like a Crime In Progress

Videofied Security Means Expedited Response

If a burglar breaks into your house and the alarm goes off, wouldn't you like to have a picture of the culprit? Wouldn't you like to know that police can receive a picture of the culprit within 20 seconds of the break-in, and may respond to your call with a greater sense of urgency than for routine calls? Ordinary security systems do not give police Videofied proof that a crime is happening within seconds of an intrusion. Do you have the vision to get Videofied?

The revolutionary VIA-Pro features a P-Cam, a digital camera integrated with a motion sensor. The P-Cam only works when the alarm system is armed. When the motion sensor is activated, the camera records 10 seconds of video, which is transmitted to the central monitoring station. The central station views the images and calls for police dispatch if necessary.

No Emergency, No Call. Central stations can quickly tell from a Videofied alarm if a crime is in progress. If you live in a community that assesses false alarm fines, Videofied technology helps you avoid charges in the event of a non-emergency activation. More importantly, your local police department will only be called if there is evidence of an emergency or crime.

Camera On

Video Is Invaluable

The P-Cam™

Bringing It Home Today almost every highly-secured premise relies on video for extra protection of its occupants and contents. Those using video have reported greater deterrence and improved prosecution of intruders. Videofied technology brings this security where it is needed most – your home and family.

The Videofied Wanted Poster No intruder wants to be identified. But the VIA-Pro system's high-tech camera can capture an actual picture of the criminal. Capturing an intruder on video is a strong deterrent against break-ins and a valuable tool for law enforcement.

Alarm-based Guard Tour Once an alarm occurs, the central station can conduct a visual guard tour from every P-Cam in protected areas of your house during the alarm. While the P-Cam is activated, central stations can choose from multiple cameras set up around your home to get a real-time view of the situation.

Archived Record The VIA-Pro maintains a complete video archive of all security events. You can look back and see exactly what happened after any alarm event.

Privacy is Paramount

You can trust Videofied technology because it offers peace-of-mind while addressing privacy concerns unique to your home and your family. The camera is only ON during an alarm. The cameras do not record unless the system is armed and the motion detector is activated by an intruder.

Jewelry stores, banks, shopping malls, and other retail outlets have been using video technology for years to monitor property and secure proof in the event of a crime. Unfortunately, these cameras run constantly, and they are unacceptable in residential settings. With alarm-only recording, Videofied technology enables retail-quality monitoring for your private residence.

You Control the Camera The camera can only be activated if the security system is armed by you – and only if the motion detector triggers an alarm. If the system isn't armed, there can be no video. If there is no alarm, the camera remains OFF. You are in complete control.

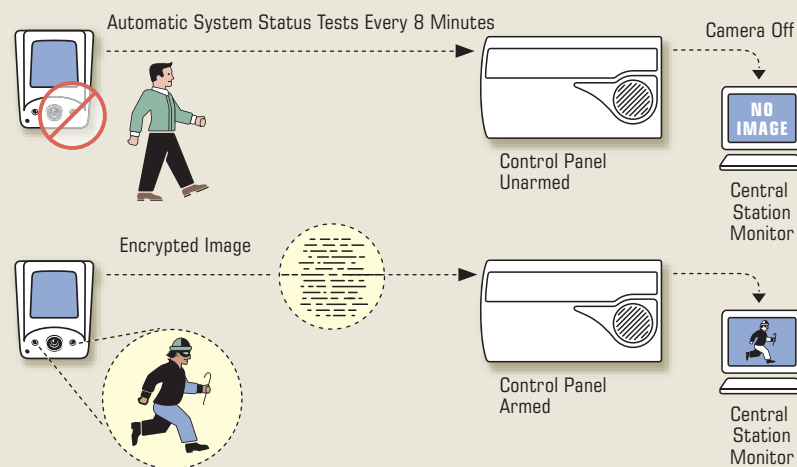

Powerful Encryption Secure, military-grade AES encryption prevents snooping or hacking.

Designated Mapping For extra peace-of-mind, the P-Cam can be associated with another sensor, such as a window contact. So, you can set your system up so that the P-Cam arms only if the window contact sensor is activated. For example, if you want to monitor your child's bedroom, the P-Cam will operate if the child's window is compromised and the contact opened, not if your child gets up for a drink of water in the middle of the night.

Would you put a camera in your bedroom? You can with Videofied because the camera is on only during an alarm.

Detector Armed Camera On

Security With Style

All components feature a discreet, aesthetic appearance that blends in with any decor. The system is completely battery-operated so no wires are needed, meaning no drilling is needed to hide unsightly wiring. Installation is fast and easy, and VIA-Pro systems are ready to monitor in less than two hours.

Extra Features for Special Performance

Automatic Phone or Email Notification Whenever there's an alarm, you're notified quickly. The e-mail also includes an attachment showing the video that triggered the alarm. You're always in the know wherever you are.

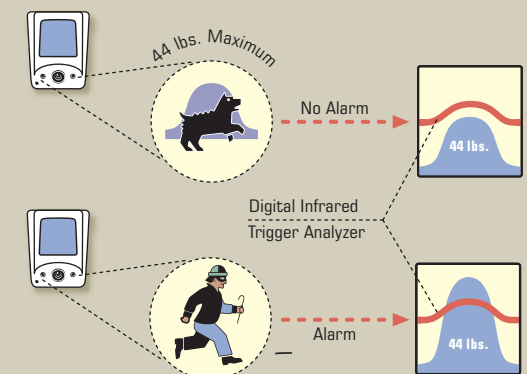

Amber Alert Plus Abduction is a parent's worst nightmare. The minute a kidnapper forces open a window or door, the incident is recorded on video. Police can be on the scene sooner. And since the abductor is photographed, police will have a head start on capturing the perpetrator.

Latchkey Reassurance The system can automatically e-mail you a picture showing that your children have arrived home safely – and alerting you if they haven't.

Camera On

Pet Immunity Don't worry about your pet triggering an alarm. The system employs digital signal processing that distinguishes between pet and human forms. The VIA-Pro ignores pets because it recognizes their heat signature.
